

Updating Cloud Destination Address in Panopto Recorder Application

Prior to recording a new video with the use of an existing installed Panopto Recorder Application after the migration to cloud environment, we need to update the host address in the Application first.

To update the address:

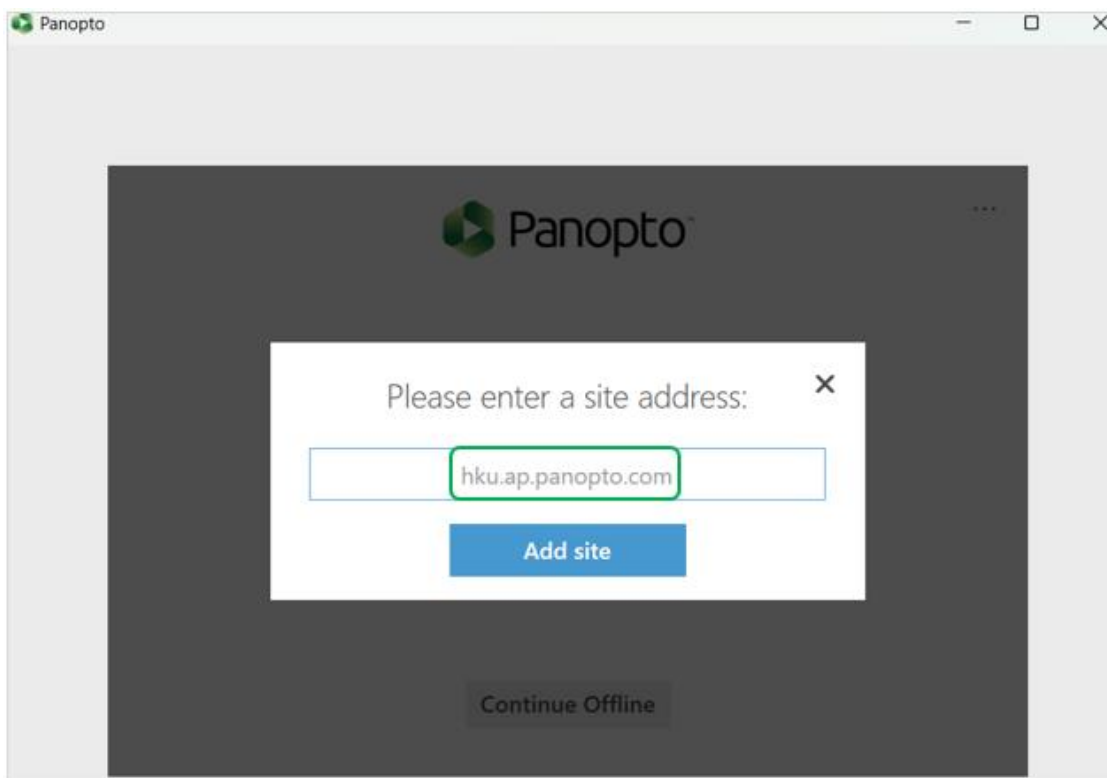

1. Let's launch the Application first.

2. Then, click “Add a site” before signing in.

3. Key in “hku.ap.panopto.com” as the site address, then click “Add site”.

4. Then, we may go ahead with signing into Panopto and start our recording as usual.

The screenshot displays the Panopto web application interface. At the top, a navigation bar includes 'Create New Recording', 'Manage Recordings', and 'Settings'. The user is logged in as 'MigrationTest-Moodle\demoteacher1' and can click 'Sign out'. Below the navigation bar, a 'Record' button is shown next to a session settings section. The session settings include a 'Folder' dropdown set to 'Upload video', a 'Name' field with the text 'Tuesday, July 8, 2025 at 3:30:25 PM', and a 'Join Session' button. A 'Webcast' checkbox is also present. The 'Primary Sources' section on the left shows a video preview window and settings for 'Video' (Integrated Camera), 'Audio' (Microphone (Logi USB Headset)), and 'Quality' (Standard). There is an option to 'Capture Computer Audio'. The 'Secondary Sources' section shows checkboxes for 'Capture PowerPoint' and 'Capture Main Screen', both of which are checked, and an 'Add Another Video Source' button. The main recording area on the right shows a preview of the 'Main Screen' with a monitor icon and the text 'Screen capture in progress'. At the bottom, there are settings for 'Resolution' (1920 x 1080), 'fps' (8), and 'kbps' (600), along with an 'Enable screen capture preview' checkbox.
